The barrel grip jigsaw is a power tool that features a low-center-of-gravity, horizontally extending barrel handle design that allows the user to get close to the cutting line during operation for increased control and stability. This structure is particularly suitable for fine curved cutting or inverted cutting operations, and is commonly used in woodworking, renovation, and metalworking. Compared with the traditional top-grip D-shaped jigsaw, the barrel grip jigsaw provides a more direct palm fit and is easy to operate in a low position, making it popular among professional craftsmen.
