According to our (Global Info Research) latest study, the global Barrier Materials for Automotive Fuel Systems market size was valued at US\$ 583 million in 2025 and is forecast to a readjusted size of US\$ 713 million by 2032 with a CAGR of 2.9% during review period.

Barrier materials for automotive fuel systems are a type of high-performance materials used to prevent fuel volatilization and penetration, and are mainly used in fuel tanks, fuel lines and other fuel system components. Common barrier materials include ethylene-vinyl alcohol copolymer (EVOH), polyamide (PA) and polyvinyl fluoride (PVDF), which have excellent barrier properties, chemical corrosion resistance and thermal stability. These materials effectively reduce fuel volatilization through multi-layer composite structures or coating technologies, improve system sealing, meet environmental regulations, and ensure the safety and durability of the fuel system.
