Abstracts

Basalt fiber: continuous fiber drawn from natural basalt. It is a continuous fiber made of basalt material after melting at 1450 °C ~ 1500 °C and drawn through a platinum rhodium alloy wire drawing plate at high speed. The color of pure natural basalt fiber is generally brown with metallic luster. Basalt fiber is a new type of inorganic environmentally friendly green high-performance fiber material. It is composed of silicon dioxide, aluminum oxide, calcium oxide, magnesium oxide, iron oxide, and titanium dioxide. Basalt continuous fiber not only has high strength, but also has many excellent properties such as electrical insulation, corrosion resistance, and high temperature resistance. In addition, the production process of basalt fiber determines that less waste is generated, and there is little environmental pollution. After the product is discarded, it can be directly degraded in the environment without any harm, so it is a veritable green and environmentally friendly material.

According to our (Global Info Research) latest study, the global Basalt Continuous Fibers market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
