Abstracts

The global Basalt Multiaxial Fabric market size is expected to reach \$ 101 million by 2032, rising at a market growth of 10.3% CAGR during the forecast period (2026-2032).

Basalt fiber multiaxial fabric is a non-crimped reinforced fabric formed by layering continuous basalt fiber rovings as the main reinforcing material in directions such as 0°, 90°, and ±45°, and fixing them with polyester yarn or other stitch-woven yarns. It features high temperature resistance, corrosion resistance, insulation, impact resistance, high strength, and good environmental adaptability.

Upstream industries mainly include basalt ore, continuous basalt fiber, untwisted roving, stitch-woven yarn, impregnating agents, and surface treatment agents; downstream applications are mainly in wind power, automobiles, shipbuilding, rail transportation, building reinforcement, pipelines and storage tanks, sporting goods, and high-temperature resistant industrial components.

The global market price for basalt fiber multiaxial fabric is \$6,700 per ton, with global sales of approximately 7,400 tons, annual production capacity of approximately 9,500 tons, and an industry profit margin of approximately 22%.

The future global basalt fiber multiaxial fabric market will develop towards higher performance, lighter weight, wider widths, and more diversified applications. With increasing demands for corrosion resistance, fatigue resistance, and cost control in wind turbine blades, automotive structural components, marine composite materials, and infrastructure reinforcement, fiber optics will gradually replace traditional glass fiber in some applications and serve as an economical supplement to carbon fiber. Companies will focus on optimizing fiber impregnating agents, layup angles, stitch-

bonded structures, and resin compatibility to improve the efficiency of vacuum infusion, RTM, and pultrusion molding. Meanwhile, hybrid fiber design, flame-retardant functionalization, automated production, online quality inspection, and low-carbon manufacturing will become important directions for product upgrades.
