A baseband processor (also known as baseband radio processor, BP, or BBP) is a device (a chip or part of a chip) in a network interface that manages all the radio functions (all functions that require an antenna).

Scope of the Report:

This report focuses on the Baseband Processor in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The increasing demand for baseband processor drives the market. Factors such as increase in the internet usage and the growth of IoT will drive the demand for smartphones. Also, the entry of new vendors who offer smartphones at prices lower than that of the established vendors has resulted in the decrease in the average selling price of smartphones, which will result in the growth in their demand. Since mobile phone processors account for a major function in wireless devices such as smartphones, an increase in their demand will drive the growth of the market. APAC is estimated to dominate this market throughout the forecast period on account of the rising disposable income of the consumers, growing internet penetration, rapid urbanization.

The worldwide market for Baseband Processor is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
