Abstracts

According to our (Global Info Research) latest study, the global Basement Ventilation market size was valued at US\$ 599 million in 2024 and is forecast to a readjusted size of USD 774 million by 2031 with a CAGR of 4.0% during review period.

Basement ventilation refers to providing air circulation to the basement through a specific ventilation system to improve the air quality and environmental conditions in the basement. Because the basement is located below the ground, it is susceptible to moisture, moldy odors and other air quality problems. Therefore, the installation of a ventilation system is essential to keep the basement dry, prevent mold growth and provide a comfortable environment.
