According to our (Global Info Research) latest study, the global Basements Waterproofing Coating market size was valued at USD 3626 million in 2023 and is forecast to a readjusted size of USD 5225.6 million by 2030 with a CAGR of 5.4% during review period.

Basements waterproofing coating is a type of protective coating that is applied to the walls and floors of a basement to prevent water from penetrating through them. The coating is made up of various materials such as cement, epoxy resins, polymer resins, and acrylics, each with its own unique properties and advantages. The coating is applied onto the surfaces of the basement using a brush or a roller, creating a seamless and impermeable seal that prevents water from seeping through the walls and floors, thus protecting the basement from moisture damage and mold growth. Furthermore, the coating also helps to improve the insulation and energy efficiency of the home as it helps to maintain a consistent temperature and reduce heat loss.
