Basement waterproofing membranes are materials used to prevent water and moisture from seeping into the basement. These membranes are designed to create a barrier that prevents water from penetrating the walls, floors, and ceilings of the basement. The most common types of waterproofing membranes are made of rubber, asphalt, or plastic materials. Some membranes are applied as a spray or paint-on product, while others are installed as sheets or rolls. The idea behind waterproofing membranes is to create a barrier that prevents water from entering the basement, which can help to prevent mold, mildew, and other moisture-related issues.
