Abstracts

According to our (Global Info Research) latest study, the global Basic Power Distribution Unit market size was valued at US\$ 752 million in 2025 and is forecast to a readjusted size of US\$ 936 million by 2032 with a CAGR of 3.1% during review period.

In 2025, global Basic Power Distribution Unit production reached approximately 3,300 k units with an average global market price of around US\$ 220 per unit, and a gross profit margin of approximately 20%-40%. Basic Power Distribution Units are non-intelligent power distribution units that provide multiple outlets to distribute electricity from a single input feed to IT and electrical loads in racks or equipment rooms. They typically include a metal housing, circuit breaker or fuse protection, power cord and plug, and standardized outlet types, but do not include network monitoring or outlet-level metering. Basic PDUs are valued for simplicity, low cost, and reliable power delivery, and are widely used in small server rooms, edge cabinets, telecom closets, labs, and cost-sensitive data center deployments where remote management is not required. The industrial chain of Basic Power Distribution Units includes upstream sheet metal and plastics, copper busbars and wiring, outlets and connectors, breakers and fuses, power cords, plugs, indicators, and fasteners. Midstream covers electrical and mechanical design, punching and bending, assembly and wiring harnessing, insulation and grounding, safety and EMC compliance testing, and factory QA. Downstream users include enterprise IT rooms, colocation and edge sites, telecom equipment rooms, and industrial cabinets. Supporting services include configuration selection, installation, maintenance, spare parts, and replacement.
