Abstracts

'Basmati is a variety of long, slender-grained aromatic rice which is traditionally from the Indian subcontinent.

Basmati rice has a typical pandan-like (*Pandanus amaryllifolius* leaf) flavour caused by the aroma compound 2-acetyl-1-pyrroline. Basmati grains contain about 0.09 ppm of this aromatic chemical compound naturally, a level that is about 12 times more than non-basmati rice varieties, giving basmati its distinctive spicy fragrance and flavour. This natural aroma is also found in cheese, fruits and other cereals. It is a flavoring agent approved in the United States and Europe, and is used in bakery products for aroma.'
