Abstracts

Batch management, as the name suggests is the process of managing batch. It is employed in the identification of one lot of production from the other owing to the unique characteristics of the lot. Moreover, batch management software is used to track the lots in the course of their lifecycle or if any complaint or recall issue arises, aids in search of items and helps in deciding which batch would fit a specific requirement. Batch management software helps to schedule, initialize, allocate and coordinate the processing of batches through control system with operator runtime clients as interface and direct functions like material consumption, batch activity and production records to historical database for effective management. Certain alarms and events corresponded with a specific batch are generated in order to notify operators or commence the automated workflow.
