Batch management, as the name suggests is the process of managing batch. It is employed in the identification of one lot of production from the other owing to the unique characteristics of the lot. Moreover, batch management software is used to track the lots in the course of their lifecycle or if any complaint or recall issue arises, aids in search of items and helps in deciding which batch would fit a specific requirement. Batch management software helps to schedule, initialize, allocate and coordinate the processing of batches through control system with operator runtime clients as interface and direct functions like material consumption, batch activity and production records to historical database for effective management. Certain alarms and events corresponded with a specific batch are generated in order to notify operators or commence the automated workflow.

The batch management software includes the server or workstation batch management software and the services to implement the overall batch project.

Global key players of batch management software include Siemens, Rockwell Automation, ABB, Honeywell, SAP, Yokogawa, General Electric, etc. Global top five manufacturers hold a share over 60%. Asia-Pacific is the largest market of batch management software, with a share about 34%, followed by North America and Europe with 33% and 28% of the market respectively. In terms of product, service is the largest segment, with a share over 53%. And in terms of application, manufacturing is the

largest downstream market, followed by pharmaceutical and life sciences and chemical.
