According to our (Global Info Research) latest study, the global Batch Pyrolysis System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A batch pyrolysis system is a type of pyrolysis plant that can process a limited amount of feedstock in batches. In a batch pyrolysis system, the feedstock is loaded into a reactor vessel, heated to a high temperature in the absence of oxygen, and transformed into volatile gases, liquids, and solids. Batch pyrolysis systems are commonly used for processing small quantities of waste materials, such as plastics, tires, and biomass, into valuable products such as fuel oil, gas, and char. They are typically smaller in size and lower in cost than continuous pyrolysis systems, making them suitable for small-scale operations or research and development projects.
