According to our (Global Info Research) latest study, the global Batch Type Blanching Machine market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A batch type blanching machine is a piece of food processing equipment used to blanch vegetables, fruits, or other food products in batches. Blanching is a cooking process where food is briefly immersed in boiling water or steam and then quickly cooled in ice water or by blowing cold air. This process is used to prepare the food for further processing, such as freezing, canning, or drying, and it helps to retain color, texture, and nutritional value. Batch type blanching machines are suitable for smaller-scale operations or for processing a variety of different products that may require specific blanching times and temperatures. They offer flexibility in processing but may not be as efficient as continuous blanching machines for high-volume production. The batch process allows for better control over the blanching conditions, which is important for maintaining the quality of the final product.
