## Abstracts

According to our (Global Info Research) latest study, the global Battery for Consumer Products market size was valued at USD 51260 million in 2023 and is forecast to a readjusted size of USD 97190 million by 2030 with a CAGR of 9.6% during review period.

Batteries are used to store energy and utilizing them at times of blackouts, power shortages, or when the demand for electricity is high. Lithium-ion (Li-ion) and lead-acid batteries are most extensively utilized in automotive and motive industries. Li-ion batteries are rechargeable batteries in which Li-ion acts as a cathode and carbon serves as an anode. These batteries have a good electrochemical performance with little resistance. The advantages of using these batteries are that they increase thermal stability, have higher current density, and have a longer shelf life when compared with other battery technologies available in the market. Li-ion batteries are used in high-power applications such as hybrid electric vehicles (HEVs), electric vehicles (EVs), and consumer electronics devices.

Rising popularity of portable electronic devices; growing adoption of rechargeable batteries; increase in consumer income levels, specifically in emerging markets; ever-increasing end-use device markets; and growing popularity of Lithium polymer batteries in applications such as mobile phones and low price are the key factors driving growth in the global consumer batteries market. The growing disposable income and decreasing prices of consumer electronics products caused by technological improvements is estimated to drive the popularity of the consumer electronics market. The declining Lithium-ion battery prices will be one of the latest trends that will contribute to the growth of this market. the America is expected to be the major revenue

contributor to the battery market for consumer products throughout the forecast period.
