Abstracts

A point-of-sale (POS) terminal is a hardware system for processing card payments at retail locations. Software to read magnetic strips of credit and debit cards is embedded in the hardware. Portable devices (i.e., not terminals anchored to a counter), either proprietary or third-party, as well as contactless capabilities for emerging forms of mobile payments, represent the next generation of POS systems.

Scope of the Report:

This report focuses on the Battery for Point of Sale Terminals in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Increased penetration of POS terminals in the retail and hospitality sectors is driving the market. The need for secure transactions by the merchants in these sectors will likely fuel the market growth during the forecast period. The rise in the number of retail outlets is another major factor contributing to the growing sales of POS terminals.

The replacement of old POS terminals and increased demand from new enterprises is estimated to fuel the sales growth. The growing adoption of EMV cards, rising need for effective information management from merchants, and increasing penetration of NFC-based payments are leading to higher unit shipments of POS terminals. However, the rising penetration of mobile card readers that offer superior benefits such as better handling and convenience will hamper the sales of conventional POS terminals.

North America dominated the market for POS terminals in 2016, accounting for over 30.0% of the revenue. However, Asia Pacific is expected to emerge as a lucrative player over the forecast period. Increasing income levels and standards of living of

people in developing countries such as India are resulting in flourishing retail markets, thereby boosting the demand for POS solutions.

The worldwide market for Battery for Point of Sale Terminals is expected to grow at a CAGR of roughly 9.8% over the next five years, will reach 9640 million US\$ in 2023, from 5500 million US\$ in 2017, according to a new GIR (Global Info Research) study.
