Abstracts

Telecom base station batteries are mainly used as backup power sources for 4G, 5G and other communication base stations. Communication energy storage refers to equipment used to store electrical energy in communication systems. Its purpose is to maintain the stable operation of the communication system during power outages or main power failure. Communication backup power is a form of communication energy storage, which usually uses lead-acid batteries or lithium-ion batteries as the energy storage medium.

According to our (Global Info Research) latest study, the global Battery for Telecom Base Station market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

In the past, communication base station backup energy storage was mainly lead-acid batteries, but they pollute the environment, are large in size, and have low energy density, and cannot meet the application needs of new generation communication technologies such as 5G base stations. Among lithium-ion batteries, lithium iron phosphate batteries with higher cost performance are now favored by communication base stations.
