Abstracts

According to our (Global Info Research) latest study, the global Battery Analyzers market size was valued at USD 163.2 million in 2023 and is forecast to a readjusted size of USD 194.2 million by 2030 with a CAGR of 2.5% during review period.

A battery is a device that stores electric charge. It consists of one or more electrolytic cells that supply electric power when connected externally to devices such as flashlights, smartphones, watches and clocks, electric cars, etc. A battery analyzer or a battery tester is a device to check the state of an electric battery. Basic battery analyzers include ammeters and voltmeters that measure the charge stored in the battery under test and its voltage output. Advanced battery analyzers are capable of determining the battery's condition by evaluating critical parameters such as its capacity for accumulating charge and any conditions affecting the performance.

The latest trend gaining momentum in the market is evolution of solid-state batteries. A solid-state battery has both solid electrodes and solid electrolytes. Solid-state batteries are much safer than lithium-ion batteries as they contain no liquid electrolyte, with the potential to possess higher energy density. Increase in electric vehicle sales will be one of the major factors that will have a positive impact on the growth of the market. Combustion engine vehicles have been the key source of harmful carbon emissions and the depleting oil and natural gas reserves have led to the growth of alternative sources of cleaner fuel for transportation in the past few years. APAC will be the major revenue contributor to the battery analyzers market throughout the forecast period.
