According to our (Global Info Research) latest study, the global Battery Design Service market size was valued at US\$ 791 million in 2025 and is forecast to a readjusted size of US\$ 1235 million by 2032 with a CAGR of 6.6% during review period.

Battery design services are specialized technical services that provide comprehensive battery solutions from cell to system level, tailored to specific application needs. These services cover the entire process, including electrochemical system selection, structural design, thermal management, safety protection, battery management system algorithm development, and manufacturability optimization. The core objective is to achieve the optimal balance between energy density, power characteristics, cycle life, safety, and cost. This service is widely used in new energy vehicles, energy storage systems, consumer electronics, and special equipment, requiring the integration of knowledge from multiple disciplines such as materials science, power electronics, mechanical engineering, and software control to provide customers with customized, high-performance, and commercially viable battery solutions.

Battery Design Service Prospects With the acceleration of the global energy transition, the increasing penetration rate of new energy vehicles, and the explosive growth in demand for new energy storage, the battery design service market is entering a golden age of development. Technological trends are evolving towards high-safety solid-state batteries, fast charging technology, CTP/CTC integrated design, intelligent BMS, and cloud management. Increasingly fierce competition in the differentiation of power batteries and energy storage systems is driving design services towards greater refinement, platformization, and intelligence. Simultaneously, the maturity of new technology routes such as sodium-ion batteries and flow batteries has opened up new

avenues for service providers. Driven by the goal of carbon neutrality, suppliers with full-stack design capabilities, simulation verification strength, and cross-domain collaborative experience will occupy a core position in the value chain.
