According to our (Global Info Research) latest study, the global Battery Electric Multiple Unit market size was valued at US\$ 4538 million in 2025 and is forecast to a readjusted size of US\$ 8213 million by 2032 with a CAGR of 8.4% during review period.

A Battery Electric Multiple Unit (BEMU) is a distributed-traction train driven by traction motors, utilizing onboard batteries as its primary power source. It represents an eco-friendly mode of rail transport that produces zero exhaust emissions. Furthermore, as it does not require the installation of overhead electrification catenary systems along the entire route, it is well-suited for non-electrified railways, aging lines, or short-distance passenger services, thereby enabling significant savings in infrastructure investment.

In 2025, the global production volume of battery-electric multiple units (BEMUs) is projected to reach 420 units, with an average price of \$10.5 million per unit.
