Abstracts

The lithium-ion batteries have a long lifespan of 5–10 years, and up to 98% efficiency (i.e., only 2% of electrical charge is lost during use). The lithium-ion batteries have very high energy and power densities, which leads to lower weight with low standby losses, and high life expectancy. Lithium-ion batteries continue to hold a large size of the battery energy storage system market owing to its features such as high energy density, self-discharge capability, low maintenance requirement, less weight, and high life expectancy. Battery energy storage system is well suited for smoothing the variable output of renewables and controlling the rapid ramping up and down of solar as well as wind generation. The grid operators and regulators are aware of the importance of battery energy storage systems and their ability to cater through multiple services. The utility operators are using these systems in their resource planning processes, which reduces the system costs and increases storage capacity.

Scope of the Report:

This report focuses on the Battery Energy Storage in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The major drivers for the growth of the market include the increasing demand for grid-connected solutions, high demand for the lithium-ion technology in the renewable energy industry, and declining prices of lithium-ion batteries. However, the factors such as the installation of battery energy storage systems in remote locations pose a challenge for the players in the market. The Americas dominated the battery energy storage market for smart grid and accounted for around 60% of the total market share. Much of the region's growth can be attributed to the increasing use of smart grids and

the increasing need for energy storage for distributed systems. The governmental support across different countries in the region and the growing investments in the development and deployment of integrated smart grid systems is expected to drive the demand for smart energy in the region in the coming years. The worldwide market for Battery Energy Storage is expected to grow at a CAGR of roughly 32.6% over the next five years, will reach 8260 million US\$ in 2023, from 1520 million US\$ in 2017, according to a new GIR (Global Info Research) study.
