The battery explosion-proof environmental chamber provides a controllable environment for the battery by precisely controlling the temperature and humidity inside the chamber to simulate the performance and life of the battery under different temperature and humidity conditions. Its main purpose is to test the stability, reliability and safety of the battery under various extreme conditions to ensure that the performance of the battery in actual use meets the standards.

With the continuous advancement of sensor and control system technology, test chambers will have higher temperature and humidity control accuracy to meet more stringent testing requirements. Future test chambers will integrate more functions, such as rapid temperature change and pressure testing, to meet more comprehensive testing needs. By introducing technologies such as the Internet of Things and big data, intelligent management and remote monitoring of test chambers can be achieved to improve testing efficiency and safety.
