Abstracts

Energy storage that corresponds to the telecom market is generally battery storage units integrated with on-grid and off-grid telecom towers. Battery energy storage units are installed to provide power supply to telecom towers during power outages and peak load shaving time. These units are either clubbed with diesel generators to switch between power sources whenever needed or used as stand-alone batteries.

Scope of the Report:

This report focuses on the Battery in Telecommunications in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The increase in power consumption to be one of the primary growth factors for the battery market in telecommunications. Off-grid energy storage technologies reduce the loss and improve the efficiency of power plants. Additionally, these technologies increase the flexibility of transmission and distribution (T&D) and help to deal with the high demand. Growing population and rapid urbanization have increased the power consumption, resulting in power outages and heavy electrical load during peak hours. Due to the increased R&D and funding received from the investors operating in the battery market, the market will grow exponentially in APAC. APAC contains the increasing number of telecom towers, growing number of cell phone users, and increased data usage. Additionally, APAC is facing growing need to overcome the high energy costs by adopting green and hybrid solutions.

The worldwide market for Battery in Telecommunications is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
