Abstracts

Battery Lithium Supplement can optimize battery first cycle efficiency and cycle life. During the formation of the SEI film on the surface of the negative electrode, a certain amount of active lithium on the positive electrode will be irreversibly consumed, which will cause problems such as low first cycle efficiency and poor cycle life. The lithium supplement is actually to pre-lithiate the electrode material, and improve the efficiency and life of the first cycle by supplementing the lithium loss during the first cycle.
