Abstracts

A battery management system (BMS) is any electronic system that manages a rechargeable battery (cell or battery pack), such as by protecting the battery from operating outside its Safe Operating Area, monitoring its state, calculating secondary data, reporting that data, controlling its environment, authenticating it and / or balancing it.

Scope of the Report:

This report focuses on the Battery Management System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The battery management system for lithium-ion-based battery leads the battery management system market since lithium-ion-based battery is popular in various application industries owing to its high energy and power density, light weight, and low standby losses.

North America held the largest share of the battery management system market in 2017, while the market in Asia-Pacific is expected to grow at a high rate during the forecast period and lead the BMS market by 2023. The high growth of the Asia-Pacific region is attributed to the presence of a number of leading portable devices manufacturers and the demand for battery management from countries such as China and Japan owing to the increasing adoption of electric vehicles in these countries. The worldwide market for Battery Management System is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
