Abstracts

According to our (Global Info Research) latest study, the global Battery Pack Connector market size was valued at US\$ 1101 million in 2025 and is forecast to a readjusted size of US\$ 2464 million by 2032 with a CAGR of 12.2% during review period.

Battery pack connectors are electrical connection components used for internal or external interfaces in electric vehicles, hybrid vehicles, energy storage systems, and industrial battery packs. They provide power or signal connections between cells/modules, busbars, BMS sampling circuits, high-voltage boxes, PDUs/BDUs, inverters, charging circuits, and service disconnect points. The estimated gross margin is approximately 34%.

The growth of battery pack connectors is primarily driven by the trend toward higher voltage and fast-charging electric vehicle battery packs, as well as modular upgrades in energy storage systems. As passenger vehicles migrate from 400V platforms to 800V and above, connectors are no longer simple conductors; they must meet requirements for high current carrying capacity, low temperature rise, shielding, HVIL, error-proofing, flame retardancy, lightweight design, and long-term reliability, making them critical safety components. Commercial vehicles, construction machinery, and energy storage battery packs place additional emphasis on high current, vibration resistance, protection ratings, on-site assembly efficiency, and operational safety.

The industry features long customer certification cycles, with barriers including automotive-grade validation, terminal contact design, injection molding, shielding structures, automated assembly, and reliability testing. The global market is dominated by integrated connector manufacturers such as TE, Amphenol, Molex, Aptiv, and

Yazaki. Chinese suppliers benefit from the rapid iteration of local EV manufacturers and expansion of the energy storage supply chain, steadily increasing their share in high-voltage, high-current connectors, service switches, busbar connections, and customized solutions.

While low-end product price competition is expected to intensify, platforms at 800V/1000V, liquid-cooled fast charging, 1500V energy storage, and heavy-duty electrification will drive an increase in the share of mid- to high-end products.
