According to our (Global Info Research) latest study, the global Battery Pack Modules Market for EVs market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Rise in demand for EVs is prompting vendors to offer battery packs at a lower cost to make EVs more affordable for consumers. The battery pack is the most expensive component of an electric vehicle, and reducing its cost is projected to boost market development in the next few years. This cost reduction can be achieved through a combination of factors, including economies of scale, improvements in battery technology, and rise in competition among battery manufacturers.

Reduction in the cost of battery packs is likely to fuel the adoption of EVs, thereby driving market progress. Battery pack prices have halved in the last 5 years, with the total cost of a battery pack standing at US\$ 100/kWh. This price is projected to further reduce to US\$ 70/kWh by 2025, owing to surge in adoption of EVs in emerging economies.
