## Abstracts

According to our (Global Info Research) latest study, the global Battery Pole Handle Welding Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The cell pole handle welding machine is one of the equipment used in the production of lithium batteries. It is mainly used for welding between the electrode pole handle (usually copper foil) and the battery case during the cell manufacturing process. This equipment usually includes welding heads, electrode holding devices, electrode positioning devices, welding control systems and other components. The welding head uses high-frequency current and pressure to weld the electrode handle and the battery case together to ensure the safety and stability of the battery core. The cell pole handle welding machine plays an important role in the lithium battery production line. Its stability and welding quality are directly related to the performance and safety of the cell. The design and operation of the welding machine need to take into account the size, shape, material and other factors of the battery core to ensure the accuracy and reliability of welding.
