According to our (Global Info Research) latest study, the global Battery Recycling Recycled Metals market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Battery recycling metals are metal resources extracted and recovered from waste batteries, such as lithium, cobalt, nickel, manganese and copper. These metals can be reused in the manufacture of new batteries or other industrial products after processing and purification. By recycling recycled metals, not only the dependence on primary mineral resources is reduced, the production costs are reduced, but also the pollution of waste batteries to the environment is effectively reduced. Battery recycling metals play a key role in sustainable development and circular economy, especially in the context of the rapid development of the electric vehicle and electronics industries.
