## Abstracts

The global Battery Repair and Maintenance Services market size is expected to reach \$ 3570 million by 2032, rising at a market growth of 10.9% CAGR during the forecast period (2026-2032).

Battery repair and maintenance services are a systematic and professional technical service whose core objective is to restore, maintain, and extend battery performance and lifespan. It is not a single step but a comprehensive process throughout the entire battery lifecycle, encompassing the detection, evaluation, and repair of damaged, aged, or degraded batteries. Services include safety testing, cleaning and maintenance, fault diagnosis, component replacement, or system reconfiguration using specialized equipment. This service is particularly important for high-voltage battery systems in electric vehicles, involving comprehensive maintenance of the battery pack, cooling system, and management software to ensure safe, efficient, and stable operation.

The battery repair and maintenance service market is experiencing explosive growth, driven primarily by the rapid increase in the number of new energy vehicles and their approaching peak maintenance period. The market is currently shifting from an early model dominated by OEM-authorized after-sales service to a more competitive landscape involving battery manufacturers, third-party professional service providers, and other stakeholders, aiming to address pain points such as exorbitant battery repair costs and limited authorized channels. At the policy level, the implementation of national standards and the release of the national occupational standard for 'Battery and Battery System Repair and Maintenance Technicians' are driving the industry towards rapid standardization and professionalization. The industry has enormous potential for future growth, driven by technological advancements and innovative business models.
