According to our (Global Info Research) latest study, the global Battlefield Management Systems market size was valued at USD 13640 million in 2023 and is forecast to a readjusted size of USD 18920 million by 2030 with a CAGR of 4.8% during review period.

A battle management system provides the military unit with an integrated common operating picture (COP), which utilizes collaborative planning tools to enhance the decision-making skills of the troops. Battlefield management systems (BMS) enable absolute situational awareness by efficiently displaying vital data to the field commander. This system offer integrated COP (common operating picture) with the help of collaborative planning tools. This helps tactical commanders to take knowledge based and responsive decisions and implement highly efficient control over operations in fluid and dynamic battlefield.

The BMS aid soldiers in performing their tasks by displaying the command and control (C2) information related to different plan overlays, enemy troops, own troops and terrain features. BMS is highly mobile tactical control and command information system. It is integrated with decision making tools, weapon platforms and sensors. It also includes hand-held or wearable information systems with individual commander or soldiers and vehicle mounted information system. The augmented need to modernize military vehicles is the key driver for the growth of this market. The upgradation of military vehicles offers advantages like easy navigation, improved surveillance performance, enhanced communication between vehicles, and better implementation of advanced weapon systems. These benefits help ground forces to increase the chances of survival in a battlefield and also increases their situational awareness. North America led the

battlefield management system market in 2016. The North America battlefield management system market has been studied for the U.S. and Canada. Significant investments in research and development of battlefield management systems for armies and special operations, increasing demand for advanced communication systems to replace legacy equipment in the warzone, and demand for blue force tracking are some of the factors that are expected to drive the battlefield management system market in the region.
