Abstracts

The global BBIT Antimicrobials market size is expected to reach \$ 278 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032). BBIT (n-butyl-1,2-benzisothiazolin-3-one) is a broad-spectrum, highly effective, and environmentally friendly industrial antimicrobial agent. It is primarily used to protect various polymer materials (such as PVC, polyurethane, silicone, and coatings) from mold, bacteria, and algae growth. It works by disrupting the protein and DNA structures of microorganisms. BBIT exhibits excellent chemical and thermal stability and is suitable for use in outdoor environments with high UV exposure.

The upstream core starting materials include o-dichlorobenzene, n-butylamine, sulfur, or sodium polysulfide. O-dichlorobenzene is used to construct the benzothiazolinone (BIT) core through amination and cyclization reactions, and then alkylated with n-butyl halide to produce the final product.

Global sales are projected to be approximately 3,000 tons in 2025, with an average market price of approximately US\$69,000 per ton. The industry's gross profit margin is approximately 15-25%.

This report studies the global BBIT Antimicrobials production, demand, key manufacturers, and key regions.
