According to our (Global Info Research) latest study, the global BCF Spinning Machine market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

BCF spinning machine uses PET, PA6, PA66 and PP as raw materials, this machine adopts extrusion, drawing, winding and texturing in one step to produce BCF yarn. Integrated modular-designed equipment of extrusion, drawing and winding make the machine available for single color and three color BCF carpet yarn. BCF is a filament extrusion production line, and the production routes can be divided into the following three types: one-step method: continuous spinning, stretching, deformation, and winding processes; three-step method: spinning and stretching combined, yarn deformation combined or spinning and winding combined, yarn stretching and deformation combined; two-step method: spinning is the same as conventional spinning, one winding tube is one color, and then three tubes of different colors are combined and stretched or deformed into BCF.
