Beacon management software is an inevitable software for a corporation or commercial space that has multiple beacons deployed. The placement of numerous beacons makes it difficult to analyze the features that are associated with the beacons. These features comprise the battery status of several beacons located in numerous physical locations. It also provides insights on the activities of visitors and their responses to the messages they obtain. This is used for proximity marketing in various industries for effectively promoting the target customers. The messages sent from the Bluetooth Low Energy (BLE) signals are customized according the marketing strategies of the companies by using the beacon management software dashboards.

Increase in need for managing platform for beacons, growth in awareness about proximity marketing among the retailers, and development in the market for smart cities drive the market. However, limitations on beacons installation is expected to hamper the beacons management software market share during the forecast period.
