The bead mill tissue grinder is a multifunctional biological sample processing device that integrates grinding, lysis and homogenization. The bead mill tissue grinder can efficiently complete the grinding, lysis and homogenization of samples in a short time (usually 1 to 3 minutes). The bead mill tissue grinder uses the '8'-shaped three-dimensional high-speed vibration (or high-speed rotation) to assist the beating or collision of grinding beads (such as glass beads, ceramic beads, steel balls, etc.) to achieve the purpose of grinding, lysis and homogenization of samples. The bead mill tissue grinder is suitable for a variety of types of samples, including animal and plant cells, tissues, bacteria, fungi, spores, etc., and even has a good crushing effect on difficult-to-handle yeast, spores, fibers and other samples.
