According to our (Global Info Research) latest study, the global Beam Couplings market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A beam coupling, sometimes called a helical coupling, consists of a single piece of material made flexible by the removal of material in a helical pattern along its length. Beam couplings can accommodate angular misalignment, parallel offset and even axial motion, of one shaft relative to the other. They also differ from other couplings in that their one-piece constructions prevent the backlash usually encountered by couplings made of multiple parts.
