According to our (Global Info Research) latest study, the global Beaming Machine market size was valued at USD 146.6 million in 2023 and is forecast to a readjusted size of USD 190.7 million by 2030 with a CAGR of 3.8% during review period.

Beam warping can be used to directly produce the weaver's beam in a single operation, by winding wrap yarns onto a beam especially in preparation for weaving, slashing, and wrap knitting. Beaming machines are specially used for direct beaming the strong yarns that do not require any sizing such as when the number of warp ends on the warp beam is comparatively small and continuous. Beaming machines are used in the manufacturing of beam warp yarn, which is then modified into thin and thick large knots.

The industry's main producers, Karl Mayer, Jakob Muller Group and Jiangyin No. 4 Textile Machinery, together accounted for 56.61% of revenues in 2019.
