The global Bean Sprouts market size is expected to reach \$ 5897 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

Bean sprouts are a common ingredient, especially in Asian cuisine, made from sprouting beans, which are obtained from the germination of beans. Mung bean sprouts and soybean sprouts are particular the main bean sources. Bean sprouts originate in Asia, where they have been made and used for thousands of years. Cultural diffusion led to the appearance of sprouts in other places and in other cuisines, and intrepid cooks began sprouting all sorts of things to add to their food. In most cases, they can be used raw or lightly cooked, and they should be used as quickly as possible. If they are going to be cooked, they can be frozen for up to three months.
