Abstracts

A bearing holder is a device used in various machines to support bearings in the correct position to receive the load and rotation of a rotating shaft. It is attached to the machine's body and holds the bearings by fitting them. The design of a bearing holder must match the load that the bearing is subjected to, and it should have sufficient rigidity based on the bearing size.

Bearing holders are predominantly used in industrial machinery. They must be rigid enough to withstand the load received by the rotating shaft. Considerations such as surface roughness of the bore and corner radii size are important. Bearing holders simplify the design and manufacturing of the housing part that holds the bearing. They are typically mounted as single or double bearing holders for deep groove ball bearings. For angular contact bearings, they can be used with a back-mounted double bearing or with an additional deep groove ball bearing.

According to our (Global Info Research) latest study, the global Bearing Holder market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

The global bearing holder market is expected to witness steady growth in the coming years, driven by increasing demand for bearings in various industries such as automotive, aerospace, and industrial machinery. The market is also likely to benefit from the growing trend of automation and the adoption of advanced technologies in manufacturing processes.

One of the key factors driving the growth of the bearing holder market is the increasing demand for high-performance bearings that can withstand heavy loads and harsh

operating conditions. This has led to the development of advanced bearing holder designs that offer improved durability and reliability.

In addition, the growing emphasis on energy efficiency and sustainability is expected to drive the demand for bearings and bearing holders that help reduce friction and energy consumption in machinery and equipment. This is likely to create opportunities for manufacturers to develop innovative bearing holder solutions that meet the evolving needs of customers.
