According to our (Global Info Research) latest study, the global Bearingless Torque Sensor market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A bearingless torque sensor, as the name suggests, is a type of sensor used to measure torque without the need for traditional bearings commonly found in torque measurement systems. Unlike traditional torque sensors where the rotating shaft is to bearings, bearingless torque sensors employ non-contact methods to measure torque. They do not require physical contact between the rotating and stationary components, which can minimize friction, losses, and wear.
