The global Beating and Freeness Tester market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A beating and freeness tester is a laboratory instrument used in the pulp and paper industry to measure the degree of mechanical treatment (beating) and the drainage capacity (freeness) of pulp fibers during the papermaking process. It helps determine the quality and properties of pulp fibers, such as their ability to bond, form paper sheets, and control the flow of water. The tester involves the beating of pulp fibers with rotating blades and measuring the drainage time or volume of water released.
