The beating type aseptic homogenizer is a commonly used equipment for microbial testing samples. Its working principle is to put the original sample and a certain liquid or solvent into a homogenization bag, and the hammer plate of the homogenizer is repeatedly used to homogenize the sample. Hammering on the bag generates pressure, causes oscillation, accelerates mixing, and softly crushes tissue cells and microorganisms, so that the components in the solution are evenly distributed. It has the advantages of easy cleaning, stable operation, safety and hygiene, and adjustable homogenization speed and time. It is widely used in medicine, food, cosmetics and other fields.
