Abstracts

The global Beauty Devices market size is expected to reach \$ 273705 million by 2032, rising at a market growth of 15.7% CAGR during the forecast period (2026-2032). In 2025, global production of beauty devices reached 141.12 million units, with an average selling price of US\$682 per unit. Beauty devices refer to a subcategory of personal care devices that use 'energy or electromechanical action' to achieve skin and body surface care effects, primarily targeting home and light professional scenarios. Key areas of focus include facial cleansing and infusion (iontophoresis/ultrasound/thermal), firming and anti-aging (RF, microcurrent, EMS), optical care (LED phototherapy, some low-energy lasers), hair removal (IPL/home lasers), acne treatment/soothing, and eye and neck care. The upstream of the industry chain includes core components and modules, light sources and drivers (LED arrays, IPL lamps/filters and high-voltage pulse power supplies, home lasers and optical paths), RF/micro-current power devices and controls, temperature control and heat dissipation components, skin contact/temperature/impedance sensors, MCUs and algorithms, lithium batteries and charging management, optical components and structural materials; the midstream consists of brand manufacturers and system integrators/ODMs; the downstream reaches consumers through e-commerce, professional beauty retailers, DTC and cross-border channels, and some salon/skin management institutions. The gross profit margin is approximately 30-50%. The global market is highly concentrated. North America is the innovation center for technology and the market, home to numerous leading device manufacturers, and consumers have a high acceptance of minimally invasive and non-invasive cosmetic technologies. The European market is mature and stable, with strict regulations (following EU medical device regulations). The Asia-Pacific region (especially China, Japan, and South Korea) is the growth engine, with a rapidly growing and diversified market. The Chinese market is driven by the 'appearance economy,' consumption

upgrades, and a large middle class, and regulatory policies are reshaping the industry landscape. The Japanese and South Korean markets are characterized by mature beauty cultures, sophisticated consumer needs, and strong local brands. The beauty device industry is entering a new phase defined by 'deep technology, compliance qualifications, superior experience, and brand trust.' In the future, brands that integrate cutting-edge technology, deeply cultivate niche needs, and successfully build a 'hardware + software + service' ecosystem will dominate the increasingly large and competitive global market. Meanwhile, the penetration of emerging markets and the globalization of home care habits will continue to inject long-term growth momentum into the industry.
