The global Beauveria Bassiana market size is expected to reach \$ 284 million by 2032, rising at a market growth of 13.2% CAGR during the forecast period (2026-2032).

Beauveria bassiana is a fungus that naturally inhabits soils around the world and acts as an entomopathogenic agent by parasitizing various arthropods, causing a condition known as white muscardine disease. Upon contact, its spores penetrate the insect's body, proliferate internally, and ultimately lead to the host's death. It is widely utilized as a biological insecticide to control pests such as termites, thrips, whiteflies, aphids, and various beetles. Its potential application in controlling bedbugs and malaria-transmitting mosquitoes is currently under investigation.

Global Beauveria Bassiana main players are BASF, Koppert B.V, Bioquirama SAS, Tari Bio-Tech, M. D Agrotech, etc. North America is the largest market, with a share nearly 35%. The Beauveria bassiana industry is becoming increasingly globalized, with key players such as BASF, Koppert, and BioWorks leading in formulation quality and adoption in greenhouse and organic markets. Indian companies like T.STANES, Multiplex, and Peptech are targeting cost-effective solutions for open-field crops in tropical climates, while Chinese firms such as Luhai Pesticide Technology and Beijing Green Agricultural Science are growing rapidly under domestic biopesticide promotion policies. Going forward, the market is expected to shift toward strains with improved field persistence and climatic adaptability, as well as synergistic blends with other biological or botanical agents. Integration with digital agriculture tools will also enhance precision application and performance tracking. As regulatory frameworks become more accommodating and new application scenarios emerge, Beauveria bassiana is poised to capture a growing share of the global biocontrol segment.
