Abstracts

The global Beech Lumber market size is expected to reach \$ 24654 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

In 2025, global production of beech lumber reached 18,600,000 tons, with an average selling price of USD 920 per ton, total production capacity of 21,000,000 tons, and an average gross margin of 31%.

Beech lumber is solid sawn timber produced from beech logs through processes such as sawing, drying, and grading. It is characterized by a fine and uniform grain structure and good machinability. Supplied mainly in board or dimension lumber form, beech lumber is widely used in furniture manufacturing, interior decoration, flooring, stair components, glulam, and various engineered wood products, making it an important material in mid- to high-end hardwood applications.

The global beech lumber market remains relatively stable, with demand mainly driven by furniture manufacturing, interior finishing, and engineered wood products. Europe is the largest production and consumption region, supported by abundant beech resources and a well-established sawn timber processing industry. The Asia-Pacific and Middle East markets rely more on imports for value-added processing and interior applications. Competition focuses on log sourcing, lumber grading, drying technology, and product consistency, with increasing emphasis on sustainable forestry certification, dimensional stability, and high-quality appearance.

This report studies the global Beech Lumber production, demand, key manufacturers, and key regions.
