## Abstracts

The global Behavioral Biometric Technology market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Behavioral biometrics refers to the use of unique behavioral patterns and characteristics of individuals for identification and authentication purposes. Unlike traditional biometric methods such as fingerprint or iris scanning that rely on physical traits, behavioral biometrics focuses on capturing and analyzing patterns in human behavior, such as typing rhythm, mouse movements, gait analysis, voice recognition, and even behavioral patterns in online activities. The underlying principle of behavioral biometrics is that individuals exhibit consistent and distinguishable patterns in their behavior, which can be used to identify and verify their identity. These patterns are often difficult for impostors to replicate or imitate accurately, making behavioral biometrics a valuable tool for fraud detection and user authentication.
