## Abstracts

The global Behavioural Biometrics market size is expected to reach \$ 3306.5 million by 2029, rising at a market growth of 23.3% CAGR during the forecast period (2023-2029).

The market for behavioural biometrics is experiencing significant growth and is expected to continue expanding in the coming years. Behavioural biometrics refers to the use of unique behavioural patterns and characteristics, such as typing patterns, mouse movements, voice patterns, and gait analysis, for user authentication and identification.

Increasing demand for enhanced security: As traditional authentication methods like passwords and PINs become more vulnerable to cyber threats, there is a growing need for more secure and reliable authentication solutions. Behavioural biometrics offer an additional layer of security by analyzing and verifying users' unique behavioural patterns, making it difficult for fraudsters to impersonate legitimate users.

This report studies the global Behavioural Biometrics demand, key companies, and key regions.
