## Abstracts

The global Bellows for Semiconductor & LCD Manufacturing Equipment market size is expected to reach \$ 137.8 million by 2029, rising at a market growth of 4.0% CAGR during the forecast period (2023-2029).

Semiconductor manufacturing equipment is a medium tool for achieving semiconductor manufacturing processes, playing an important role in all aspects. According to SEMI, worldwide sales of semiconductor manufacturing equipment increased 5% from \$102.6 billion in 2021 to an all-time record of \$107.6 billion in 2022.

In recent years, the localization process of China's semiconductor industry has further accelerated, and the performance of semiconductor equipment is more flexible than the overall industry. The localization of semiconductor equipment is ushering in a golden wave, and domestic semiconductor equipment is facing more opportunities for verification and trial use, technical cooperation, and import substitution. For the third consecutive year, China remained the largest semiconductor equipment market in 2022 despite a 5% slowdown in the pace of investments in the region year over year, accounting for \$28.3 billion in billings.

The record high for semiconductor manufacturing equipment sales in 2022 stems from the industry's drive to add the fab capacity required to support long-term growth and innovations in key end markets including high-performance computing and automotive. Additionally, the results reflect investments and determination across regions to avoid future semiconductor supply chain constraints like those that surfaced during the pandemic.

Metal bellows are elastic vessels that can be compressed when pressure is applied to the vessel, or extended under vacuum. When the pressure or vacuum is released, the bellows will return to its original shape. Especially welded bellows are manufactured by welding a number of individually formed diaphragms to each other. Welded metal bellows provide high reliability and long life for applications such as wafer lift and chamber lift, vacuum feedthroughs, and vacuum valve seals. Bellows are widely used in semiconductor equipment like CVD, PVD, ETCH, Ion Implanter, CMP, and Wafer Transfer Robots.
