Abstracts

According to our (Global Info Research) latest study, the global Bellows Load Cell market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Bellows Load Cell is a static load cell that uses a metal bellows welded seal and is filled with inert gas to improve performance. When an object is added to the sensor, the weight of the object will act on the structure of the bellows, causing the bellows to bend and deform. This deformation is then converted into an electrical signal, which can display the weight of the object. Bellows load cells have high precision and strong overload resistance. They are widely used in electronic belt scales, hopper scales, platform scales and other special scales in the fields of industry, agriculture, commerce, etc., as well as various material tests and electronic transformation of other force measuring devices.
