## Abstracts

According to our (Global Info Research) latest study, the global Bellows Pressure Switch market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A bellows pressure switch is a device used to detect and control fluid pressure. It consists of a bellows that deforms when subjected to changes in external pressure. This deformation is connected to the switch mechanism through a mechanical connection or an electronic sensor, which triggers a change of state of the switch. When the pressure reaches or exceeds a preset value, the bellows deforms, triggering the switch mechanism and switching the switch from one state to the other. This state change can be used to control the operation of other devices, such as starting or stopping a system, alerting or alarming. Bellows pressure switches are commonly used in industrial and automation systems to monitor the pressure of liquids or gases, and as a safety device to protect equipment and systems from excessive or low pressure.
